

# ATOLLO CLOUD BACKUP

## Backup NAS

NAS Backup service is an add-on service that comes alongside another Backup plan.

Our Qnap / Synology NAS backup solution allows you to save your NAS device data directly to the cloud with dedicated software proven for this purpose. In fact, the backup is not done by connecting the shares but directly of the NAS device.

**3,00**  
€/Month

## Caratteristiche

- Easy implementation:** Installation and deployment of software for Synology and QNAP NAS is easy and flexible. The agent can be installed both in the Backup server and on NAS devices, and backup is performed automatically
- Multiple destinations:** We offer you a centralized solution that protects your company's information by copying Backups to your local device (optional) and Cloud servers quickly securely and automatically
- Incremental block backup:** With our In File Delta technology, only the blocks that have changed are copied, optimizing backup speed
- Recovery points:** With our solution, the Synology / QNAP user can recover any file at the exact momen-to of the backup
- Versioning:** You can set how many versions of your files will be stored in secure backups in the software settings
- Data accessible only to you:** The 256-bit security key allows the agent to encrypt the files before they are stored on the NAS device, so that only you can read them and ensure maximum confidentiality
